The upgrades will result in an increase in total project installed capacity of about 32 megawatts (MW). The licensee indicates the turbine runner replacements will not result in any increase in hydraulic capacity, and will not involve construction of any new dam nor diversion, any change in the normal maximum surface area or elevation of an existing impoundment, any change to project operations, or the

addition of new water power turbines other than to replace existing turbines. Since all the upgrade work will be performed within the powerhouses, there will be no streambed or ground disturbances associated with installing the new turbine runners. Neither installation nor operation of the new turbine runners will result in impacts to water quality, ability to maintain minimum flow requirements, or any other environmental impacts.
